

ACEweb: Online Registration Software

ACEweb is the companion to the Student Manager Registration software. ACEweb, used in conjunction with Student Manager, lets you instantly publish classes online, which means that students can browse, register, and securely pay for classes 24 hours a day, 7 days a week.

- **Real time data connection** to the Student Manager database.
- **Responsive Design.** ACEweb is mobile friendly to recognize and adjust to the mobile devices used by your students to browse and select courses.
- **Flexible layout and design options.** The web pages support CSS and may be edited to match the design of your program's home page. With purchase you receive a Responsive Design Makeover that applies your school's existing web design (colors, layout, graphics) to your ACEweb pages.
- **Data collection.** You control the student information you collect.
- **Support for catalog requests.** Students can request information on your courses and identify interest areas.
- **Group registration option.** In addition to enrolling themselves in one or many courses, students can enroll others in courses during the registration process. This is helpful for parents registering children or firm representatives registering their employees.
- **Multiple branding options.** Give your unique program types a distinct web look while maintaining a single database. For example, provide a distinctive look for professional programs and youth camps. All data will flow into the central Student Manager database.
- **Instructor portal.** Instructors may email their students, assign grades, and track attendance.
- **Recall of past registrations.** Student Manager will remember and present to the student the names of persons they have previously registered for classes. The student can simply select the child or employee for future registrations.
- **Personalized course recommendations.** Once a student creates an account and selects desired interest codes, he/she is presented with a list of courses that may be of interest when returning to the site.
- **Customized navigation.**
 - Use ACEweb as your primary course catalog to manage the entire course topic display, detailed listing, course information pages, and checkout.
 - Use your existing program description pages and direct students to an organized topical listing page managed by ACEweb. Use an existing micro page for a specific course and direct students to an Express Registration page for a one stop checkout.

- **Custom Express Registration forms.**
 - Elect to use a single page form to capture student demographic information, course fee and optional fee choices, and payment method. This is particularly useful for conferences and one-time events where the student is not likely to want a shopping cart for multiple course purchases. These forms may be customized on a course-by-course basis.
 - Create a custom email confirmation for each Express Registration form.
- **Multiple options for publishing, promoting, and searching for courses. Search by:**
 - Program Category (user-defined) single-tier or two-tier, with the option to add pictures and descriptions for each category.
 - Location
 - Instructor
 - Visual calendar (Requires calendar module)
 - Custom search mode. In addition to a keyword search, students can search by criteria including day of week, time of day, weekend only courses, etc.
 - Links coming from other web sites
- **The ability to view class history.** Once logged in, students may view their class history, check the status of upcoming classes, view upcoming classes in a calendar format (requires calendar module) and, if they have enrolled others (proxy registrations), may view the classes of those students as well. Students can self-print receipts, certificates, and unofficial transcripts.
- **Support for Osher Lifelong Learning Institute (OLLI) programs.**
- **Fully integrated support for JER Online™, ed2go, and ProTrain on line classes.**
- **Integrated payment solutions.** ACEweb is ready to integrate with several payment gateways including, but not limited to:
 - Authorize.net
 - Bluefin Payment Services
 - Cashnet
 - CyberSource
 - Official Payments
 - PayPal Verisign/Payflo Link
 - Nelnet
 - TouchNetMarketplace/uPay/Tlink
 - USA ePay
